

Evoke Quadrant Model Home Issaquah, WA

Structural properties of the panels enabled wide opening options, windows and other open air features.

Mid-sized production builder moves forward with creating neighborhoods designed around the commitment to sustainability. Builder builds model homes with sustainable building products such as SIPS to showcase a sustainable end result with lower operating costs, in hope to draw in potential home buyers.

The SIPS roof used on this model home helped the project achieve its goal of a energy-efficient and high performing home, while displaying to buyers how green and sustainable living is attainable.
